Handbook (BioKey® Fingerscan, BASIC, V12.x-2022)

|	
Fingerprint Sensor:	Swipe Sensor without Latentfinger
Operating Temperature:	-20 ~ +85 °C
IP Class:	IP65 (Outdoor, Waterproof)
Speicherkapazität:	max. 35 Fingerprints Template (max. 2 Masterfinger)
Declaration of Conformity (CE):	after EU-Guideline 2002/95/EG

Function	Description	To do
Step 1: **Enroll One Masterfinger**	Provide a Masterfingers (the same Finger swipe over the Sensor at least 6-times)	Initial State (red + green LEDs ON) → Enroll the first Masterfinger, **at least 6-times** over the Sensor …………………….. until the **green LED** flash shortly
Step 2: **Enroll One Userfinger**	Userfingers are used to open the door (Userfinger should be different from the Masterfinger)	Swipe the Masterfinger → red + green LEDs On → Enroll the new Userfinger, **at least 6-times** over the Sensor ……………………..until the red + green LED flash shortly
Step 3: **Open Door**	with Userfinger	Swipe one Userfinger over the Sensor
Reset **(Delete All)**	Reset device to initial state Reset Code =	with Infrared Keypad: DA -> Reset Code-> OK the red + green LED on

II. All Functions (in Details)

1. Masterfinger Enrollment (Swipe the first Master Finger at least 6-times over the Sensor)
Condition: Device is initialized; Red+Green LEDs are alight

- Swipe the masterfinger first time over the sensor.
  Red+Green LEDs: flash for appr. 2 sec->go out ->are alight again for the next Masterfinger
- Swipe the master finger second time over the sensor again.
  Red+Green LEDs: flash for appr. 2 sec->go out ->are alight again for the next Masterfinger
- …………………………………….
- Swipe the masterfinger **at least 6-times** over the Sensor**, until the** Green LED flashes for appr. 3 sec.
  The Masterfinger enrollment is completed. It is now possible to enrol Userfinger.

OK   **NOT OK**

2. Userfinger Enrollment (Userfinger should be different from the Masterfinger!)
- Swipe the masterfinger once over the sensor. Red+Green LEDs: flashes for appr. 3 secs -> go out
- Swipe the new Userfinger over the Sensor
- Do repeat ……………………….. **at least 6-times**
- Until the Red+Green LEDs: flashes for appr. 3 secs -> go out
  The Userfinger enrollment is completed. It is now possible to open the door with Userfinger

3. Identification
- Swipe an Userfinger, if OKAY, green LED, otherwise red LED

4. **Delete All (Reset)**, Factory setting (Reset Code= 6-digit):
   With the Infrared Keypad before the Fingerscan Reader: **DA -> Reset Code -> OK**
Device is initialized; Red+Green LEDs are alight

to change the Reset Code (Very Important!):
D-> E-> Old Code -> OK-> NEW CODE -> OK -> NEW CODE (repeat) -> OK

Tips: Alternative reset: Swipe the Masterfinger **three times** over the sensor and waiting for about 30 sec -> Device is initialized.
